DIGITAL HUMAN
CUSTOMERS CLONE GUIDE

UNITH

To clone a real person and transform them into a Digital Human, the user must record a video following certain criteria to ensure an optimal result.

The video must be in loop format, which means that the first and the last image must be identical.
UNITH will be in charge of generating this effect from the material provided by the client.

1

RECORDING

FRAMING
MIDDLE SHOT: Type of framing that shows the person from the waist to the head.
(Interviews, conversations... shows both facial and body expression).
It is essential to frame correctly so as not to cut off shoulders and keep the composition balanced.

BACKGROUND
Plain, undistracted and good contrast to the character. At least 1.5m separation between subject and background.
(It is advisable to avoid tones similar to those of the subject to ensure better definition).

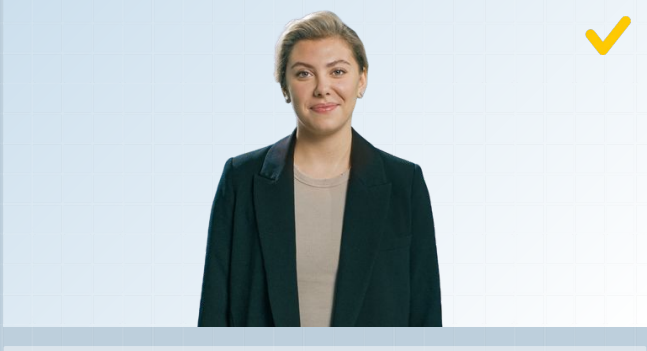
TECHNICAL
MP4 - H265/H264
Resolutionn: 1920x1080px HD
Optimum file weight: 1MB
Length: 30-40 segundos

POSE
Natural and relaxed. Standing, with a straight posture and fixed look at the camera.

- No transparencies, no satin or shiny or reflective elements.
- Clothes in solid tones, without complex patterns. .

2

ACTING



MOVEMENTS

Light and natural (keeping the face parallel to the camera):
- Breathing
- Blinking (at least ONCE, no more than 3 times)
- Torso (like changing weight to one leg)
- Mouth: The person must speak for at least half of the video. For the other half, the person must stay static according to the other requirements.

GESTURES
Subtle
Project friendliness:
- Moderate smile, preferably without showing teeth.
- Nod your head softly, not repetitive.
- Tilt head slightly, as if trying to understand something.

- Avoid brusque movements, large changes in posture and exaggerated gestures.

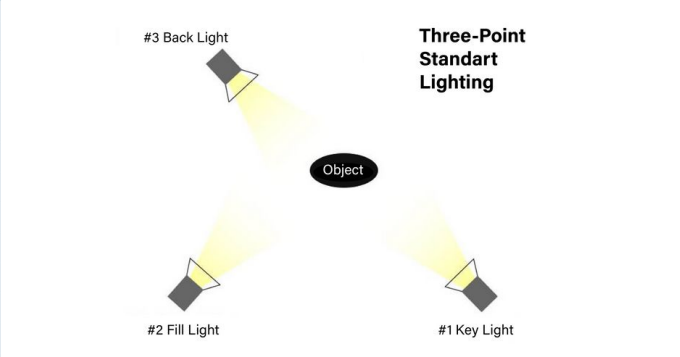
3

ILUMINATION

Lighting is very important to generate a Digital Human in the context of a video.
The 3-point lighting system is ideal:

STANDARD 3-POINT LIGHTING

1. MAIN/KEY LIGHT: Bright Intensity
Models the subject, positioned next to the camera.
2. FILL LIGHT: Medium Intensity
Illuminates the shadows in a diffused way, located on the opposite side of the main light.
3. BACK LIGHT: Soft Intensity
Separates the figure from the background, increases the feeling of 3D, located behind the subject.



If you do not have the resources for such lighting, try to comply with these requirements:

- White light, avoid warm or coloured lighting.
- Avoid harsh and contrasting light.
- Avoid very intense/direct lighting.
- Avoid spotlights from very right angles.
